**Introduction**

POSB Bank invites qualified cloud service providers and system integrators to submit proposals for the design, implementation, and handover of an enterprise-grade Amazon Web Services (AWS) Landing Zone.

POSB is undertaking a broader technology modernisation and digital transformation programme, positioning AWS as a strategic enterprise cloud platform. The bank intends to host multiple categories of workloads on AWS, including but not limited to transactional banking systems, digital channels, analytics platforms, integration services, middleware, regulatory systems, and development and testing environments.

To support secure, scalable, and compliant cloud adoption across the organisation, POSB seeks to establish a governed AWS Landing Zone that will serve as the standard foundation for all current and future AWS workloads, ensuring consistency in security, networking, identity, governance, and operational controls.

**Objectives of the RFP**

The objectives of this RFP are to:

- Establish a secure, well-architected, and compliant AWS multi-account environment
- Provide a workload-agnostic cloud foundation capable of hosting diverse banking systems and services
- Eliminate unmanaged and standalone AWS accounts across the bank
- Enforce consistent security, governance, identity, networking, and cost controls
- Enable rapid, controlled, and auditable provisioning of AWS accounts
- Align cloud adoption with banking regulatory requirements, including those of the Reserve Bank of Zimbabwe
- Ensure the AWS environment can support future business, regulatory, and technology needs

**Background and Current State**

**Existing Cloud Environment**

POSB has initiated enterprise cloud adoption on AWS and currently has multiple workloads in various stages of deployment and evaluation. These workloads span

**BIDDING DOCUMENT FOR PROCUREMENT OF PROCESS AUTOMATION & PRODUCT SOLUTION- THE DESIGN AND IMPLEMENTATION OF AN ENTERPRISE AMAZON WEB SERVICES (AWS) LANDING ZONE**  
**PROCUREMENT REFERENCE NO: POSB2026/124**

different business and technology domains and have been onboarded by different teams over time.

As a result of this organic adoption, POSB has experienced:

- Multiple AWS accounts created without centralized governance
- Lack of centralized identity and access management
- Inconsistent security baselines across workloads
- Limited visibility into cost allocation and consumption
- Increased operational and regulatory risk
- Emergence of unmanaged ("shadow IT") cloud usage

These challenges have highlighted the need for a standardized enterprise AWS Landing Zone.

**Pre-Existing Hybrid Infrastructure (Out of Scope for Landing Zone Procurement)**

POSB has already implemented the following hybrid infrastructure components under an earlier phase of its cloud enablement programme. These were established within an isolated cloud account to support initial workloads and are not foundational elements of the Landing Zone being procured. They are listed here solely to provide context, as the proposed Landing Zone will be expected to integrate with and extend them where appropriate:

- Site-to-site VPN connectivity to three data centres
- A central cloud-based VPN gateway
- A cloud organisation and account hierarchy
- Integration with the corporate Active Directory through a directory service connector
- Single sign-on capability for federated user access
- Hybrid DNS resolution between on-premises and cloud environments
- Private connectivity endpoints for accessing cloud services without traversing the public internet
- Centralised activity logging and operational monitoring
